Subject: Jayden

Comment #1:

Dang, sorry I missed that...But did hear that Jayden changed the people around him as much as being in the regular classroom changed him. I had the same experience in a severe-profound classroom I worked in, where the kindergarten teacher invited our kids in. She "normalized" special needs kids for her kindergarteners. Beautiful!

Comment #1:

I am no immunologist, but I do know the CDC considers the CMV to be among the greatest causes of congenital developmental disability. <https://www.cdc.gov/cmvc/clinical/congenital-cmv.html> This is not the specific Green Monkey Simian virus Dr. Martin mentioned, but the fact that the CMV can cause damage to healthy children is not news. One in 200 children are born with Congenital CMV. A few will go on to have life long health problems.
